

Michel Huot

Retired Research Forester

MICHEL is a retired forestry researcher from the Quebec Ministry of Forests, Wildlife and Parks. He worked there as a forest engineer and touched various fields including silviculture research. During his stay in forestry research, he planned missions outside Quebec and met researchers from Ontario, the United States and the Maritime provinces. Michel also participated in the production of volume 1 of the guide sylvicole du Québec with Bruno Boulet.

He remains interested in forestry by continuing to follow the rapidly evolving literature in new areas of research, including carbon, adaptation of silviculture to climate change, invasive species and ecosystem management. Certain scientific publications collected by Michel are selected to meet the needs of the NHRI and published in the section ***A new window on current events*** presented in each new edition of the Leaflet. Michel's contribution allows NHRI to keep everyone working in the forestry sector well informed. Michel is also the reviewer of the NHRI Leaflet
