

Stéphanie Landry

Postgraduate student

- **STÉPHANIE** holds a bachelor's degree in biology from the Université de Moncton and a master's degree in environment from the Université de Sherbrooke. She is currently a doctoral candidate in biology at UQAR.
- She has considerable experience in the field of environmental management. Passionate about sustainable forest and wildlife management, she is also an assistant professor of forestry at the University of Maine at Fort Kent.

At NHRI, his research focuses on the use of remote sensing tools, such as satellite images and LIDAR to determine certain characteristics of forest regeneration. The accuracy of regeneration inventories using remote sensing is less and few researchers have attempted to characterize regeneration in forests with a rather complex structure like that of the Acadian forest. Stéphanie will thus push back the methodological limits of remote sensing in order to improve the characterization of forest regeneration in complex forests.
